

MAHMUT ENES SAĞLAM

COMPUTER ENGINEER

PROFILE

As a computer engineering master's student, I am developing myself both theoretically and practically in data science, data mining, and meta-heuristic optimization. Drawing on my system discipline from cybersecurity training at SiberVatan and infrastructure internship at Türk Telekom, I focus on utilizing AI tools as an engineering leverage to build rapid prototypes and optimize data pipelines. Alongside optimization, I develop robust data management applications using the Java/Spring Boot ecosystem, enterprise frameworks (JoinFaces/PrimeFaces), and relational databases. With a strong focus on understanding corporate data flows and industrial software architectures, I am dedicated to updating my skillset to build advanced predictive models and optimized enterprise solutions.

WORK EXPERIENCE & PROGRAMMES

- Sibervatan** 2024 DECEMBER - PRESENT
Student
 - I have gained practical experience in pentesting, web security, malware analysis & reverse engineering, OSINT, and cyber threat intelligence.
 - Practices were gained with Hackviser, a Turkish site similar to TryHackMe.
 - The importance of working for society and the state was understood, and teamwork skills were developed.
- Türk Telekom Adana Bölge Müdürlüğü** 2024 August
Intern
 - Examine network architectures, transmission structures, and observe the telecommunications infrastructure on site.
 - Team spirit within the company and communication skills were developed

ACADEMIC & RESEARCH PROJECTS

- Optimization Research: Developed and evaluated hybrid Multi-Strategy Particle Swarm Gazelle Optimization (MPSOGOA) and Beaver Behaviour Optimization (BBO) frameworks for feature selection.
- Enterprise Systems & Data Management: Developed an Industrialist Registration and Tracking Panel utilizing Java, Spring Boot, JoinFaces, and PrimeFaces. Implemented relational data structures, secure login mechanisms, and custom data tables to effectively model corporate and industrial data flows.

EDUCATION

2020 - 2025

ADANA ATU

- Computer Engineering

2025 - Continuing

ADANA ATU

- Master's Degree in Computer Engineering

SKILLS

- Java & Spring Boot
- Enterprise Frameworks (PrimeFaces / JSF)
- Relational Databases & SQL
- Python
- Cybersecurity
- Mediation
- Critical Thinking

LANGUAGES

- Turkish (Fluent)
- English (Intermediate)
